

Map Modernization Tools

Bob Franke

FEMA Region VII

Abstract

As Map Modernization enters the home stretch, FEMA has digital flood hazard data for most areas of the United States. This is a major step forward, and supports the use of digital flood map data for all official National Flood Insurance Program purposes.

To support the digital vision, FEMA has developed several tools for the use of digital flood hazard data. Regardless of your level of experience, everyone will benefit from one or more of the tools. During the session, the various tools will be demonstrated, and possible applications will be discussed.

Topics covered during the presentation include a brief overview of MapMod; use of a Web Map Service; use of the FIRM scan images; Flood-Map Image Tool (F-MIT) to create FIRMettes; Mapviewer-Web; Mapviewer-desktop; and Digital FIRM data.
